

# Introduction to GSAK V8.2 (Geocaching Swiss Army Knife)

Macros

By: Allyn56

# Introduction

- ❑ Provides added features to GSAK
- ❑ Hundreds of macros available on line through the GSAK site
- ❑ Used to sort, filter, create stats, find data for challenges, just about anything you want
- ❑ Macros have a gsk filename extension

# Finding Macros

Just about any macro you would want is available from the GSAK site

GSAK (Geocaching Swiss Army Knife) - Mozilla Firefox

File Edit View History Bookmarks Tools Help

gsak - Google Search GSAK (Geocaching Swiss Army Knife) x +

www.gsak.net

Search Norton Safe Web Share Setup Vault Login Assistant

Grab It New Mark as Show Configurations Show Recipes Show the Sites Export Them

**GSAK (Geocaching Swiss Army Knife)**

Home Order Forum Members Google Map **Macros** Help

GSAK is the all in one Geocaching and waypoint management tool. Major features include: Multiple databases, sending/receiving waypoints to GPS; Google maps, conversion to many mapping formats, PDA output (including CacheMate support), HTML output, extensive searching, macro support, backup and restore, distance/direction from other waypoints (including caches, locations, post codes) and much more. GSAK only runs on Windows operating systems (2000, XP, Vista, Windows 7)

For a more complete feature set please click [here](#).  
For a screen shot of GSAK click [here](#)

GSAK is **FREE** to download and use, but after 21 days of unrestricted use you get a nag screen. You can keep using GSAK after the 21 days, but if you want to remove the nag screen you will need to register the program ( *Note: PayPal will now accept credit cards directly - you DONT have to set up a PayPal account.* ). To register GSAK or see the benefits of registration click [here](#)

Need help? GSAK has its own support forum. Go here <http://support.gsak.net>

There is also a GSAK 101 getting started guide that you can download from [here](#)

**NEW** 21st September, 2012 - Version 8.2.0 is now ready for download. **Note:** Version 8 is a chargeable upgrade for V7 registered users - for more information see [here](#)

[Download version 8.2.0](#) (19.2mb) or if busy or slow try [here](#). Please see the [version history](#) for a list of changes.

For Version 7 users that do not wish to upgrade to V8 you can download the latest V7 (7.7.4.36) [here](#)

**Unsolicited user testimonial:**

I used to use a clunky assortment of g7toWin, GPSBabel, Utopia, CacheMateConvert, and a host of other little scripts in combination with my standard map applications like MapQuest, Streets & Trips etc. I am pleased to inform you that after I put your product through its paces for a couple months, I now use only one application for manipulating and storing waypoint & geocache data: GSAK. This is the best piece of GPS waypoint management software I've ever purchased. It is also the greatest value. The features of GSAK are excellent, the interoperability with other applications is excellent and your responsiveness to requests is excellent. Thank you very much for your fine work. I declare myself a very satisfied customer.

Sincerely,  
Daryl Hinz

Under the covers GSAK uses GPSDabel  and is powered by the Geocaching.com live api 

Macros Tab

# Finding Macros

- ❑ Search the site for the type or macro you want.
- ❑ Click on the macro name to go to the macro page
- ❑ It will take you to the last page or last post where you can find the macro file
- ❑ Click on the macro file to download the macro to your computer
- ❑ Formatted like a forum page where you can see information and posts related to the macro

**Version 1.4**

Brings this macro up to date with changes made in the [original 101 Challenges macro](#):

- 1) Macro now searches for the highest number (e.g. 100) first and works it's way down to the the lowest number (e.g. 1 or 0). This insures that the higher numbers, which are harder to find, are found first.
- 2) Macro allows for user input of the upper and lower limits of the numbers to search for.

- 3) Numbers in the HTML report (but not the text report copied to the clipboard) are now padded with periods so that the "No" columns sorts correctly.
- 4) Corrects an error that would sometimes allow a cache to be counted twice.

Please post questions, suggestions or comments in [this thread \(click here\)](#).

Save in:  
User/Appdata/  
Roaming/gsak/  
macros

# Installing Macros

Once you have downloaded the macro, then within GSAK click on the Macro Tab on the top of the current page and the Macro Manager screen will appear.

Click on Install at the bottom of the page and then click on the folder button to the right of the window and navigate to the macro folder mentioned before.

Click on the macro file you want to install and then click install

# Installing Macros

The screenshot shows the 'Run Macro' application window. At the top, there are tabs for 'Installed Macros' and 'Other'. Below the tabs is a search bar and a 'Clear' button. A red text label indicates 'Macros listed: 25'. The main area contains a table with columns: 'User Data', 'Macro File', 'Description', 'Version', 'File Date', and 'Last Run'. The first row is highlighted in cyan. Below the table is a row of buttons: 'Run', 'Version?', 'Install', 'Uninstall', 'Resynchronize', 'Exit', and 'Help'. A red arrow points from a blue callout box containing the text 'Click Install' to the 'Install' button.

# Running Macros

Customizing the toolbar to create a macro button is easy but does require a few steps:

- ❑ Click on the Macro tab and then on Button Configuration
- ❑ The Button Configuration screen will appear and you can enter the number of the macro button, the button text, and description
- ❑ Choose the macro you want to associate with the button by finding the filename in the macro folder
- ❑ Choose the buttons icon by locating the icon picture file

# Custom Macro Buttons

The image shows a 'Macro Button Configuration' dialog box with several fields and buttons. Red arrows point from text labels to specific parts of the dialog:

- Location on Toolbar**: Points to the 'Macro Button' dropdown menu, which currently shows '1-'.
- Button Text (Leave blank if only picture)**: Points to the 'Button Text' input field, which is currently empty.
- Icon Filename and file path**: Points to the 'Icon file name' text box, which contains the path 'C:\Users\Allyn\AppData\Roaming\gsak\UserImages\statslogo.bmp'.
- Button Description**: Points to the 'Button Description and Hint' text box, which contains the text 'Find Stats'.
- Macro Filename and file path**: Points to the 'Macro File Name' text box, which contains the path 'C:\Users\Allyn\AppData\Roaming\gsak\Macros\FindStatGen44Beta.gsk'.
- Thumbnail of button**: Points to the 'Toolbar sample' preview area, which shows a small icon with a red circle and a white arrow pointing left, with the text 'Stats' below it.

At the bottom of the dialog, there are three buttons: 'Save' (with a green checkmark), 'Cancel' (with a red X), and 'Help' (with a question mark).

# Custom Macro Buttons

You have created your custom button and defined what macro to run, now you need to show it on the toolbar

Place your cursor over the toolbar portion of the screen and then right click your mouse to show the popup window.

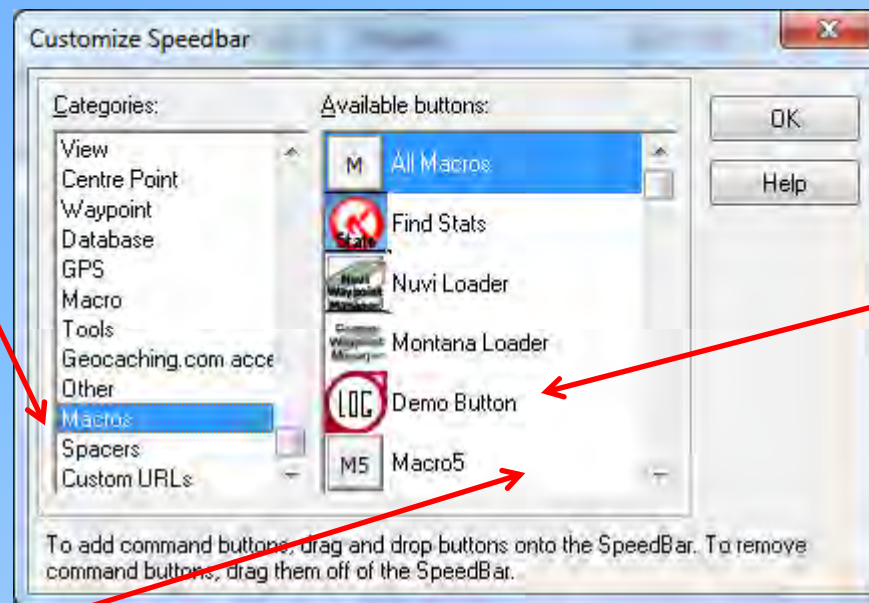

Select Customize Tool Buttons to get the Customize Speedbar menu screen

Choose the button and with the mouse left click and hold down the mouse button and drag to the location on the toolbar you want your macro button

# Custom Macro Buttons

Select  
Macros  
(Not Macro)

Highlight desired  
button and left  
click the mouse  
and while holding  
down the left  
button drag the  
button to the  
toolbar where you  
want it located

Available  
Buttons

# Custom Macro Buttons

My custom macro buttons are here. One for statistics and two for loading GPX files to my GPSr.

# Find Stats Generator

A popular statistics generator for your Geocaching.com profile page. Has just about everything you want then some for statistics.

- ❑ Total finds by year
- ❑ Cumulative finds by year
- ❑ Milestones
- ❑ FTF's
- ❑ Who has found your caches and whose caches have you found
- ❑ Elevations
- ❑ Maps
- ❑ Etc.

# Find Stats Generator

Load the Macro just like you saw for all other macros

Create a custom button if you want

Run the macro and then setup key items such as:

- ❑ The database where you store your finds
- ❑ The database where you store your caches
- ❑ Your Username
- ❑ The types of charts you want
- ❑ Then the information you want displayed

# Find Stats Generator

Selecting and setting up databases

I like to use a separate database for my finds and I call it My Finds

The same for my caches – My Caches

You use these databases to run pocket queries for your caches (make a pocket query specific to the caches you have placed)

You run the My Finds pocket query that GC.com has setup and then populate the database when you update your stats on Find Stats

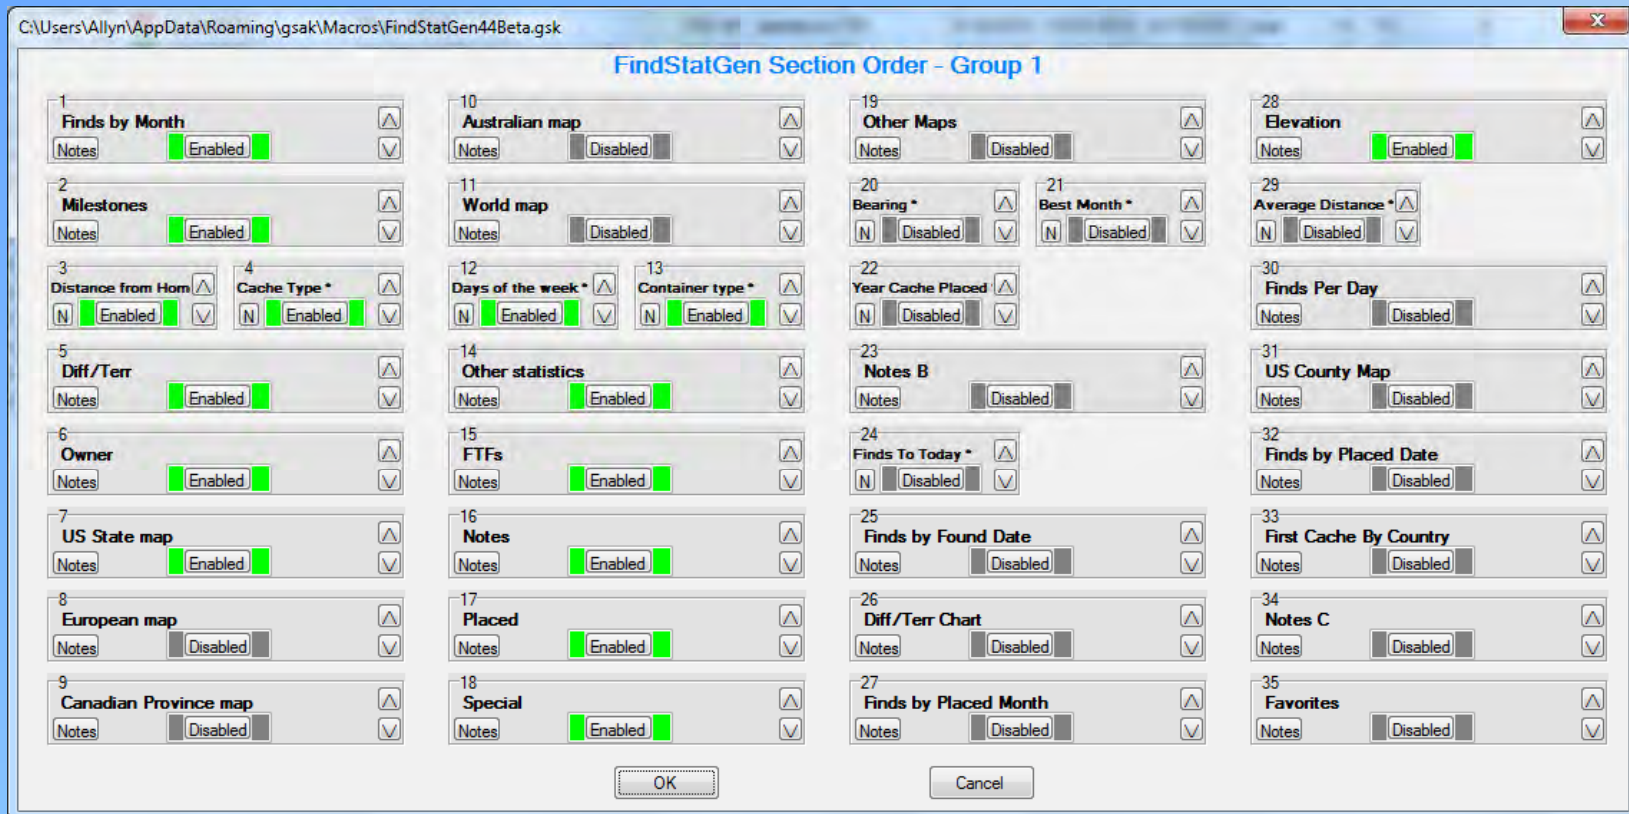

# Find Stats Generator

After you select the main display items and input the required data, you can then start to select the information you want displayed.

- ❑ Click on the Selection Order button to go to the displayed items screen
- ❑ Click on the Maps button to select the maps you want displayed
- ❑ Click on the Notes button to add special macros that run inside Find Stats or add notes to be displayed
- ❑ Click on the Number button to see what numbers you can display
- ❑ Click on the Elevation button to select what elevation information to display
- ❑ Click on the Home button to enter your home coordinates

# Find Stats Generator

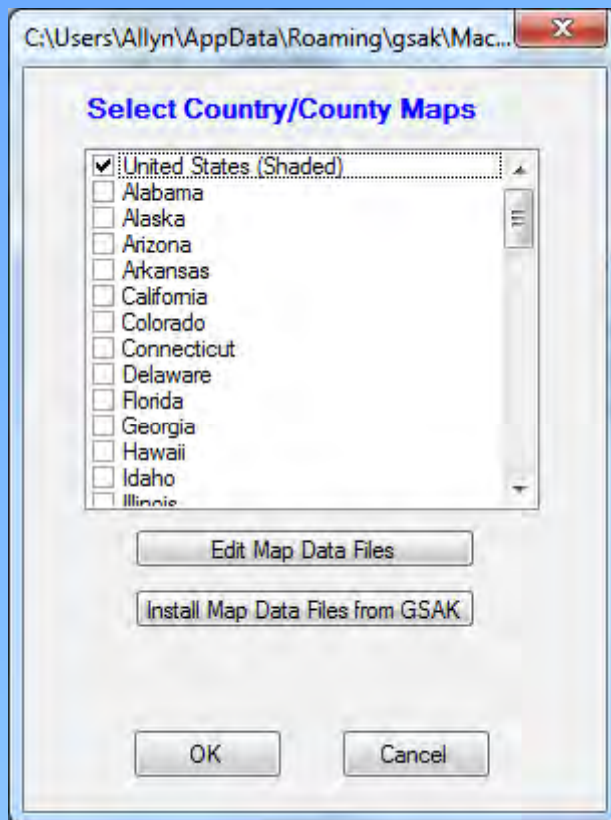

Click on the up or down order to select the order or location of the information to be displayed on the screen

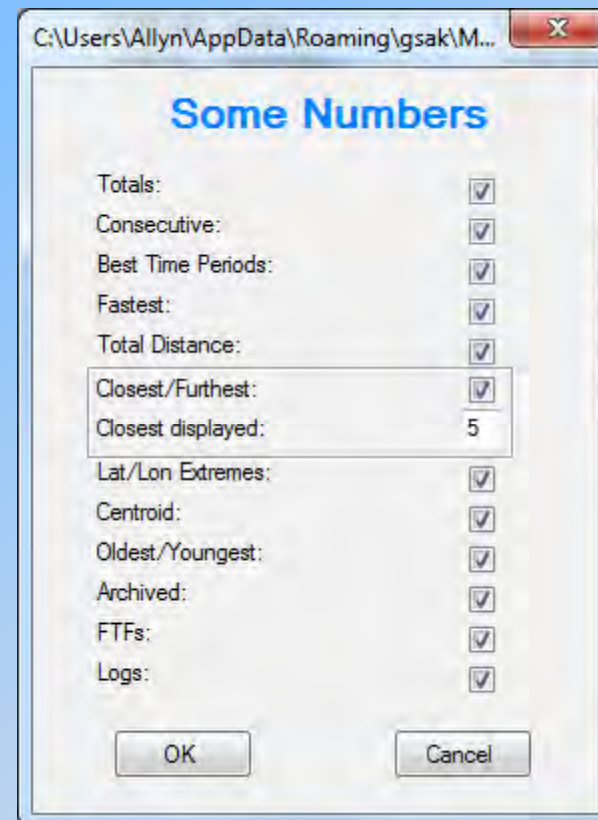

Click on the Enabled or Disabled button to show or hide the information – Green is displayed – Grey is hidden

# Find Stats Generator

Select the maps you want to display to show locations you have found caches in

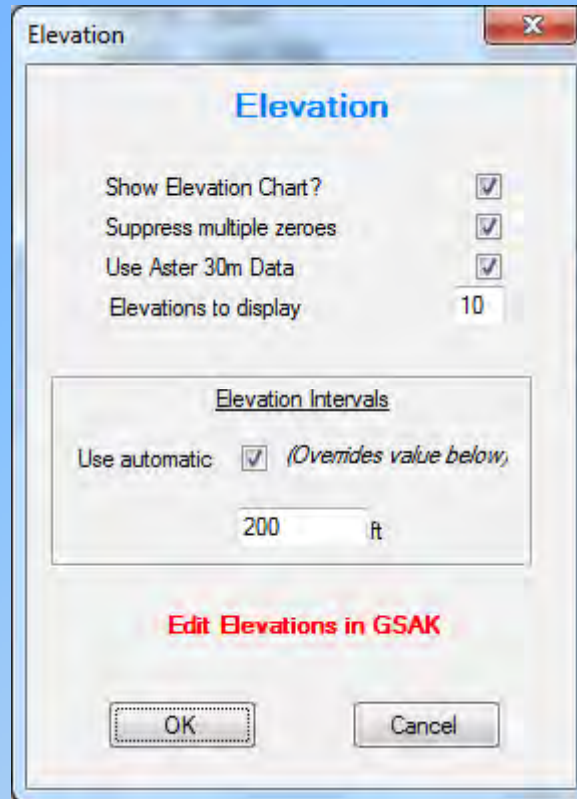

Select the numbers you want displayed

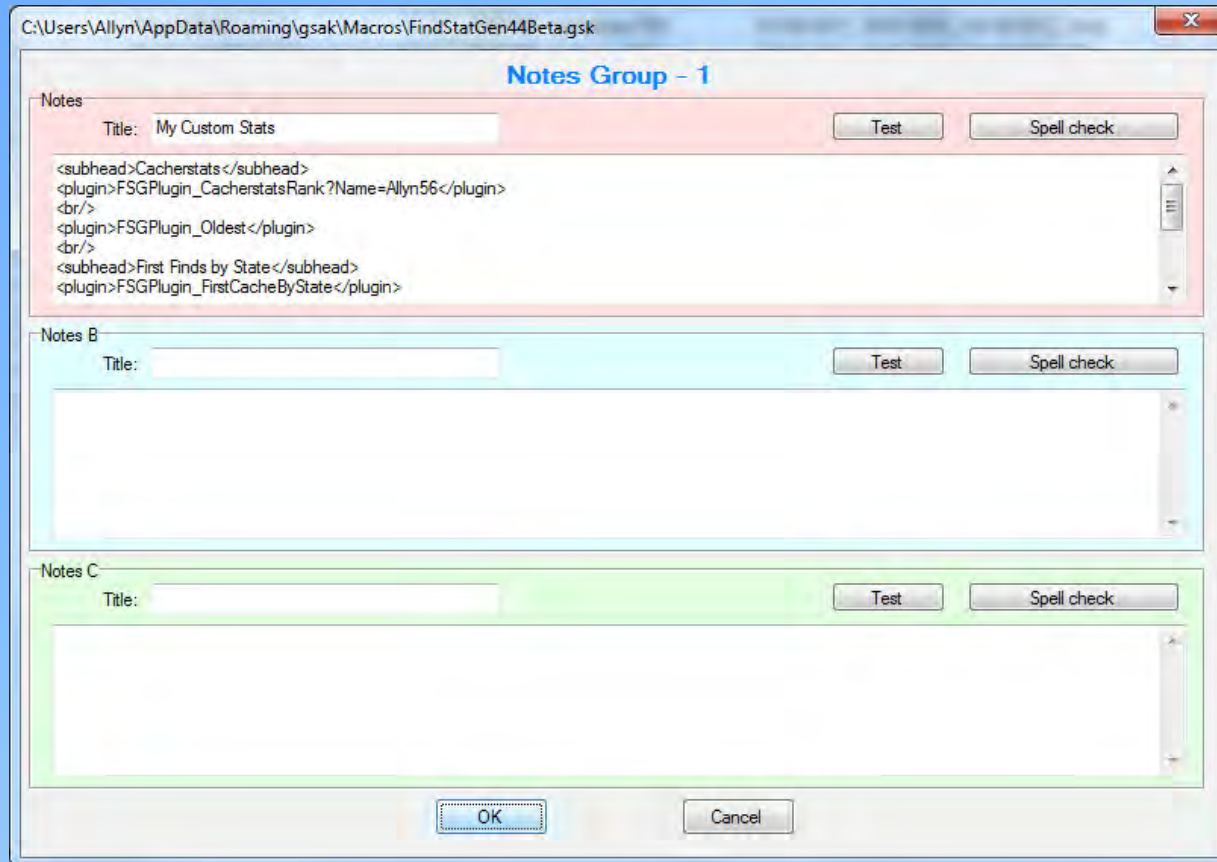

# Find Stats Generator

Select the elevation information to be displayed

# Find Stats Generator

This is where you can add notes or additional macros that run inside Find Stats. This shows my ranking, favorite points awarded, etc.

# Find Stats Generator

After you have selected all of your settings you can then run the macro by clicking on the OK button at the bottom of the macro page.

The macro will run searching find data in you're My Finds database and you're my Caches database

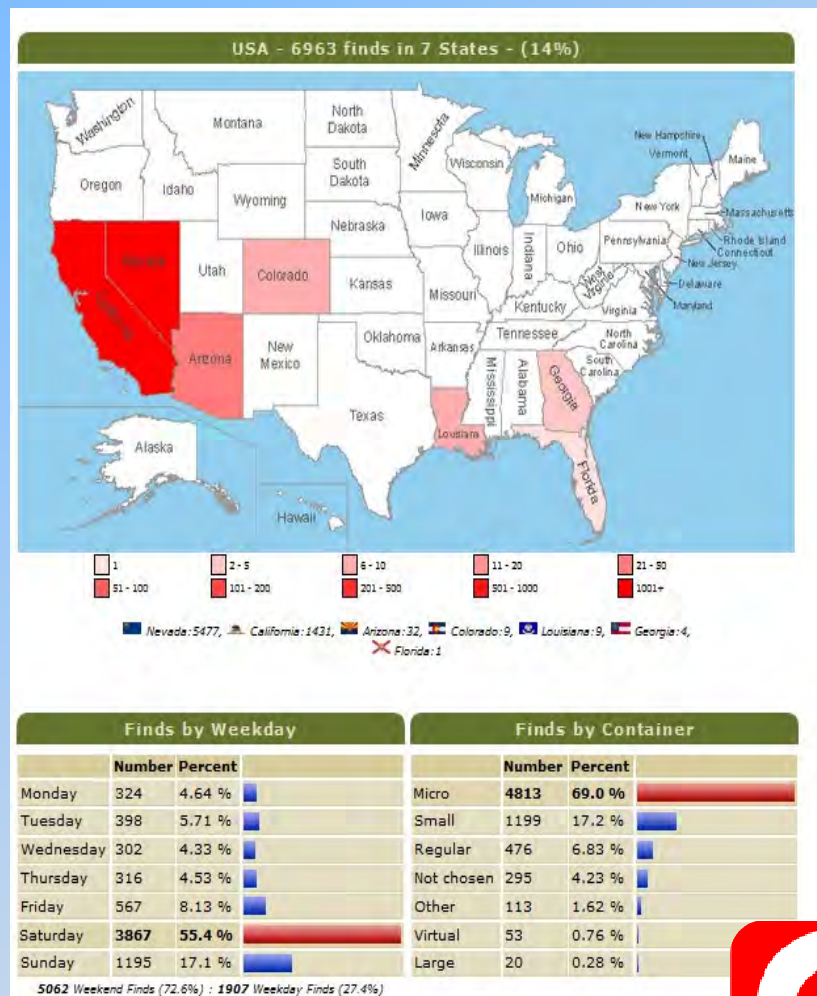

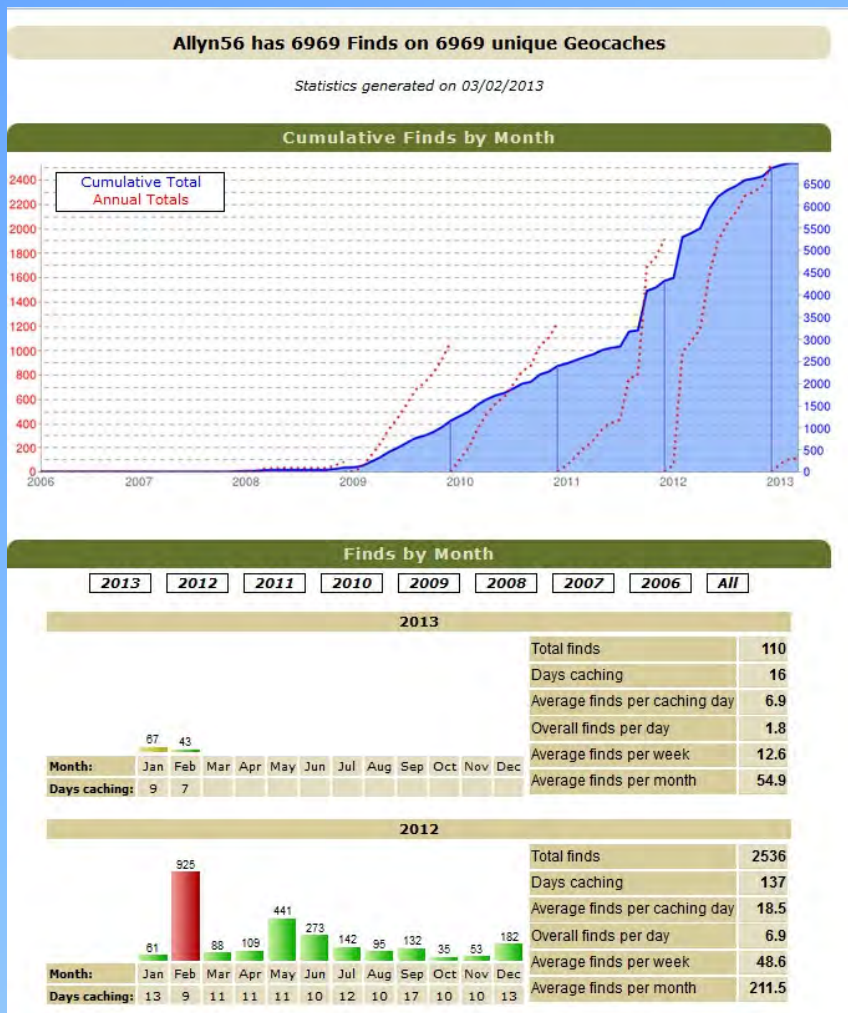

When the macro is done it will popup a browser window to show you the web page display of your data

If you don't like the layout, just go back and run the macro again modifying the selections from before

When the web page is displayed it will also copy all of the html code to your Windows Clipboard for you to paste into the profile on GC.com

# Screen Shots

# Screen Shots

# FindStats Generator

After you complete the macro and get the information in a format you want to display then go to your user page on Geocaching.com and go to your public profile and then edit the profile

Click on the Edit Profile link and then when you get to the edit page erase the existing html code you want to delete (if you have done this before) and then paste the new html code into the page

Click on save and your profile has been updated with the new data from the Find Stats macro run
